Profile

Motivated QA Intern with hands-on experience testing a live SaaS application across the full defect lifecycle — from test case design and execution to bug reporting and regression verification. Proficient in manual testing, API testing using Chrome DevTools and Postman, and RBAC validation across multiple user roles. Adept at delivering structured, detailed bug reports and communicating findings clearly to both technical teams and non-technical stakeholders. Seeking an entry-level QA Engineer role to apply practical testing skills and contribute to delivering high-quality software products.

Skills & Strengths

- Manual testing
- Test Case Writing
- Bug reporting & tracking
- API Testing with Postman
- SQL Basics
- Agile/Scrum
- Jira
- Jmeter
- Smoke testing
- Regression testing
- JavaScript
- Github
- UI/UX testing
- Playwright basics
- Exploratory testing
- Communication Skills
- Problem Solving
- Multi tasking
- Teamwork

Experience

04/2026 – Present

SQA intern

- Designed and executed 50+ manual test cases across 8+ core modules including client management, job scheduling, quoting, invoicing, timesheets, and team permissions on a live SaaS application
- Identified and documented 50+ defects with detailed reproduction steps, expected vs. actual results, severity classifications, and environment details using a structured bug reporting format
- Validated role-based access controls (RBAC) across 4 user roles (Admin, Dispatcher, Worker, Limited Worker), uncovering critical permission boundary violations that exposed sensitive financial data to unauthorized roles.
- Performed API testing using Postman and Chrome DevTools Network tab to verify request/response integrity, HTTP status codes, and backend data accuracy across key workflows
- Conducted structured regression testing after each fix cycle to confirm defect resolution and prevent recurrence across affected modules
- Applied exploratory testing techniques to uncover edge cases in form validation, financial calculations, and scheduling logic beyond formal test case coverage
- Communicated defect findings through structured bug reports and delivered a client-facing status report translating technical findings into clear, non-technical language

Education

2020 – 2024

BS Software Engineering

National University of Modern Languages, Islamabad

Languages

- Urdu
- English

Hobbies

- Learning new technologies
- Travelling
- Gaming

Projects

04/2026 – Present

ServicePro360 (Field Service Management SaaS)

- Executed 50+ manual test cases across core modules including client management, job scheduling, quoting, invoicing, timesheets, and team permissions on a Nuxt 3 / TypeScript SaaS application
- Validated role-based access control (RBAC) across 4 user roles (Admin, Dispatcher, Worker, Limited Worker), identifying and documenting critical permission boundary violations
- Intercepted and analyzed API requests and responses using Chrome DevTools Network tab and Postman to verify backend data integrity
- Identified and reported 50+ bugs with detailed reproduction steps, expected vs. actual results, and severity classifications using structured bug report format
- Performed regression testing after each fix cycle to verify issue resolution and prevent defect recurrence
- Applied exploratory testing techniques to uncover edge cases in financial calculations, form validation, and scheduling logic
- Manipulated localStorage and intercepted fetch requests via browser console to test session behavior and runtime state
